Hello Dr. Murphy,

Thank you for your interest in publishing with us!

George and I met yesterday and discussed your proposal in more detail. You've done a good job explaining why it fits within the series, but the most important thing is the title, which doesn't seem to align with the core theme.

We are happy to consider it and would request you to revisit the title and the outline to ensure it aligns with the theme of Earth Observation.

Please let me know when you have that ready and I'll send it out for peer review.

Thanks and regards,

Menka
